

Organization

The Canadian Institute of Steel Construction (CISC) is the national industry organization representing the structural steel, open web steel joist and steel platework fabricating industries. CISC formed in 1930 is a non-profit industry association. CISC operates as a technical, marketing and government relations organization that promotes good design and safety, as well the efficient, economical and sustainable use of structural steel.

Membership

Canadian steel fabricating firms, Canadian steel mills, steel service centres and steel detailers are Members of CISC. Its Honorary Membership category includes representatives from major foreign steel producers. Associate Membership categories exist for Erector and Supplier firms. Individuals who are registered Engineers or Architects may join CISC as Associate Professional Members; contractors, quantity surveyors and others interested in steel construction may join as Associate Technical Members. (A listing of Members is available on our web site www.cisc-icca.ca).

Products

CISC Fabricator Members produce fabricated structural steel for buildings, bridges, tanks, platework and other similar steel structures. In addition, many Member companies are also engaged in related activities, such as heavy machinery manufacturing, production of castings and wholesaling of steel.

Services

- ◆ Preparation of design aids such as the Handbook of Steel Construction and other technical publications.
- ◆ Representation on committees of national and international organizations that prepare codes, standards and specifications.
- ◆ Information services related to design and costing of steel structures.
- ◆ Representation in the area of industry-government relations.
- ◆ Educational activities such as provision of speakers and the presentation of workshops, seminars, conferences and continuing education courses in steel design.
- ◆ Marketing activities to promote the use of steel in construction. Its major marketing effort is through its Project Analysis Division (PAD). PAD is staffed by specialists skilled in comparing costs and designs of structures built with steel and competitive materials. Computer programs are used extensively to aid project planners in making structural design and cost decisions.
